

## TPDV Digital Video Instant Replay

### *Programmable, High-capacity Digital Video Recorder*

The Brandes Associates TPDV is a fully programmable Digital Video Recorder that combines the capability and quality of lossless hard disk-based digital video recording with the TiVo-like flexibility and ease-of-use of a consumer PVR.

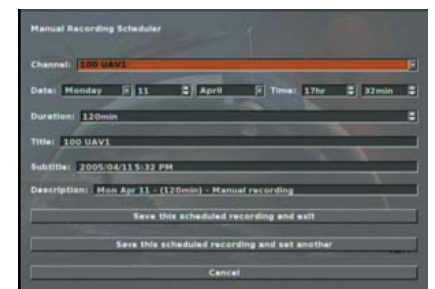

Ideal for UAV Ground Control Stations and command centers, the basic TPDV-1 unit can capture up to 100 hours of high quality video, allowing UAV operators to record payload video in a lossless format. The TPDV-4 model adds the ability to record four analog video streams while simultaneously viewing the recorded content on a VGA or composite NTSC video monitor. Recorded video can be archived onto DVD.

### Operation

The TPDV digitally records incoming composite analog video streams on an internal hard drive. Fully programmable recording allows the operator to select record time and video source through a user-friendly graphical interface. While video is being recorded, the operator can seamlessly switch between viewing live feeds, previewing the current video stream recording, or reviewing previously recorded content. Playback can be paused and resumed as needed, with full rewind and replay and capability to show clips and portions of the stream with variable delay from real time.

*Simple PVR-like interface allows point-and-click control of recording playback and scheduling.*

### Features

- ▶ Stores up to 100 hours of video streams without any video tapes
- ▶ Lossless digital recording, significantly better quality than video tape
- ▶ Allows operator to preset a schedule and TPDV will automatically turn itself on and off
- ▶ Selectable from multiple video inputs connected to the box (TPDV-4)
- ▶ Provides a utility to burn DVDs from previously recorded material (TPDV-4)
